IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in

the application:

Please amend the claims as follows:

1. (Currently amended) A system comprising:

a plurality of server nodes communicatively coupled on a network to serve

applications over the network to a plurality of clients;

a data object to store a hierarchical representation of configuration data

associated with the server nodes, the data object having a root and a plurality of

nodes branching from the root; and

a property sheet data structure logically positioned at one of the nodes,

the property sheet data structure including a plurality of property names, a

plurality of non-modifiable parameters and a plurality of modifiable parameters,

wherein each respective property name included in the property sheet data

structure is associated with a non-modifiable default parameter value and,

optionally, a modifiable custom parameter value; and

a user interface to display contents of the property sheet data structure,

the user interface to enable a user to change a default parameter value

associated with a particular name to a custom parameter value;

wherein in response to the user specifying a custom parameter value in

place of a default parameter value for a particular name, the name is associated

with the custom parameter value but the property sheet data structure still

preserves the value of the default parameter.

2. (Original) The system as in claim 1 wherein the data object is stored

Atty. Docket No.: 6570P017

-2-

within a central database accessible by each of the server nodes.

App. No.: 10/749,851

Amdt. dated Feb. 8, 2007

3.(Currently amended) The system as in claim 1 further comprising: a user interface to display contents of the property sheet data structure, the user interface to enable a user to modify a selected modifiable parameter associated with the property sheet data structure, wherein, once the selected modifiable default parameter has been modified, the modified default parameter is stored independently with respect to the non-modifiable custom parameters in

- 4. (Currently amended) The property sheet system of claim 3, wherein the non-modifiable default parameters associated with the property sheet data structure are modifiable using an interface other than the user interface.
- (Original) The property sheet system of claim 1, wherein the property sheet data structure is associated with a particular component or a set of components contained within a clustered system.
- 6. (Currently amended) The property sheet system of claim 3_1, wherein the user interface comprises:

a first dialog box to display contents of the property sheet data structure, the first dialog box including a plurality of entry rows, each respective entry row of the first dialog box including a first column to display names of corresponding properties, a second column to display current configuration parameters parameter values associated with corresponding properties and a third column to indicate if a configuration parameter value displayed in the second column is a default parameter or a custom parameter; and

App. No.: 10/749,851 Amdt. dated Feb. 8, 2007

the property sheet data structure.

a second dialog box including a data entry field to enable a user to modify

a selected default or custom parameter value.

7. (Currently amended) The property sheet system of claim-4 6, wherein

a custom parameter associated with a property is modifiable by selecting the

second dialog box of the corresponding property and entering a new parameter

in the data entry field of the second dialog box.

8. (Original) The property sheet system of claim 7, wherein the second

dialog box of the corresponding property is selected by clicking a custom check

box inside the third column of a corresponding entry row.

9. (Original) The property sheet system of claim 8, wherein the second

dialog box further includes a name field to display a name of a corresponding

property and a default field to display a default configuration parameter

associated with the corresponding property.

10. (Original) The property sheet system of claim 9, wherein the

second dialog box further includes a data type field to display the data type

associated with corresponding property.

11. (Currently amended) A method comprising:

storing binaries and configuration data associated with a plurality of server

nodes within a data object, the data object to store a hierarchical representation

of configuration data associated with the server nodes, the data object having a

Atty. Docket No.: 6570P017

root and a plurality of nodes branching from the root;

App. No.: 10/749,851 Amdt. dated Feb. 8, 2007 providing one or more property sheets at one or more of the nodes, each of the property sheets including a plurality of configuration parameters associated with the server nodes, each parameter associated with a name, a default parameter value and optionally a custom parameter value; and

updating the configuration of one of the server nodes by <u>receiving a</u>

<u>parameter update request from a user via a user interface and responsively</u>

entering a custom configuration parameter <u>value in place of a default</u>

<u>configuration parameter value</u> in a property sheet associated with the server node;

wherein in response to the user specifying a custom parameter value in place of a default parameter value for a particular name, associating the name with the custom parameter value but preserving the value of the default parameter.

- 12. (Original) The method as in claim 11 further comprising: storing the data object, configuration data, binaries and property sheets within a central database, the central database accessible by the server nodes.
- 13. (Currently amended) The method of claim 11, wherein updating comprises:

opening the property sheet in a property sheet graphical user interface, the graphical user interface comprising a first column for storing parameter names, a second column for storing a current parameter value and a third column for storing an indication as to whether the current parameter value is a custom value or a default value;

selecting the indication in the third column;

App. No.: 10/749,851 Amdt. dated Feb. 8, 2007

Reply to Final Office action of Dec.12, 2006

responsively generating a data entry window having a custom field for entering a custom value; and

receiving user entry of entering a custom value in the custom field.

14. (Original) The method as in claim 11 wherein the server nodes are Java server nodes supporting the Java 2 Enterprise Edition ("J2EE") standard and wherein the property sheet parameters comprise J2EE parameters.

15. (Currently amended) A method for updating configuration settings for a plurality of server nodes comprising:

storing binaries and configuration data associated with a plurality of server nodes within a data object, the data object to store a hierarchical representation of configuration data associated with the server nodes, the data object having a root and a plurality of nodes branching from the root;

of the property sheets including a plurality of configuration parameters

associated with the server nodes, each parameter associated with a name, a

default parameter value and optionally a custom parameter value;

updating the configuration of a first one of the server nodes by receiving a parameter update request from a user via a user interface and responsively entering a custom configuration parameter value in place of a default configuration parameter value in a property sheet associated with the server node;

wherein in response to the user specifying a custom parameter value in place of a default parameter value for a particular name, associating the name with the custom parameter value but preserving the value of the default parameter;

App. No.: 10/749,851 Amdt. dated Feb. 8, 2007 modifying configuration-parameters within a property sheet, the

configuration parameters associated with one or more server nodes within the

plurality of server nodes, wherein each configuration parameter is associated

with a non-modifiable parameter;

storing the property-sheet within a configuration hierarchy defined by a

hierarchical configuration-data object in a central database;

communicating an indication of the modification configuration parameter

<u>update</u> to one or more other server nodes;

identifying in the data object the modified associated with the updated

configuration parameters within the property sheet and determining if the

configuration data stored on the other server nodes is out-of-date; and

downloading the modified updated configuration data from the central

database to the other server nodes if the configuration data stored on the other

server nodes is out-of-date.

16. (Currently amended) The method as in claim 15 further

comprising:

acquiring a lock on the configuration parameters stored within the property

sheet prior to modifying updating the configuration parameters at the first server

node.

17. (Currently amended) The method as in claim 16 further

comprising:

releasing the lock on the configuration parameters after the configuration

data has been updated at the central database and/or at each of the other server

nodes.

-7-

18. (Currently amended) A system comprising:

server node means communicatively coupled on a network, the server node means to serve applications over the network to a plurality of clients;

hierarchical data object means to store a hierarchical representation of configuration data associated with the server nodes, the hierarchical data object means having a root and a plurality of nodes branching from the root; and

property sheet means logically positioned at one of the nodes, the property sheet means including a plurality of property names, a plurality of non-modifiable parameters and a plurality of modifiable parameters, wherein each respective property name included in the property sheet means is associated with a non-modifiable default parameter value and, optionally, a modifiable custom parameter value; and

user interface means to display contents of the property sheet means, the user interface means to enable a user to change a default parameter value associated with a particular name to a custom parameter value;

wherein in response to the user specifying a custom parameter value in place of a default parameter value for a particular name, the name is associated with the custom parameter value but the property sheet means still preserves the value of the default parameter.

- 19. (Original) The system as in claim 18 wherein the hierarchical data object means is stored within a central database accessible by each of the server nodes.
- 20. (Currently amended) The system as in claim 18 further comprising:
 user interface means to display contents of the property sheet data
 structure, the user interface means to enable a user to modify a selected

App. No.: 10/749,851 Amdt. dated Feb. 8, 2007 modifiable parameter associated with the property sheet means, wherein, once the selected modifiable default parameter has been modified, the modified default parameter is stored independently with respect to the non-modifiable custom parameters in the property sheet means.

21. (Currently amended) The property sheet means of claim 20, wherein the non-modifiable custom parameters parameter values associated with the property sheet means are not user-modifiable via the user interface.

22. (Original) The property sheet system of claim 18, wherein the property sheet means is associated with a particular component or a set of components contained within the server node means.
